Summary

Software Engineer with **5** years of experience building scalable, production AI systems on financial and healthcare data. At S&P Global, led a **5**-person team rebuilding a document-AI platform (OCR + PyTorch CNNs) that processes **10K+** financial documents a day at **95%** accuracy, cutting licensing costs by **80%**. Currently build automated data pipelines and models for forecasting, planning, and budgeting for **60K+** clients across Florida, covering **$200M+** in monthly payments. Experienced in time-series forecasting, statistics, deep learning, and cloud deployment.

Experience

Data Scientist Jun 2025 – Present
Florida Agency for Persons with Disabilities *Tallahassee, FL*

- Built **15+** automated Python/SQL pipelines over millions of records, tuning queries to cut processing time by **83%**.
- Ran statistical analyses and hypothesis tests on service utilization and rate changes for **60K+** clients, informing agency-wide budget and policy decisions.
- Engineered validated fact tables integrating **5+** warehouse sources (claims, providers, services), reconciling records across Medicaid billing and case-management systems into a single source of truth.
- Introduced Power BI reporting at the agency, defining KPIs on utilization and spending and building executive dashboards used by leadership for budget decisions.
- Built time-series forecasting models for rates, utilization, and budgets, landing within **5–10%** of actuals across **$200M+** in monthly payments.

AI/ML Researcher Jun 2024 – Sep 2024
Florida State University *Tallahassee, FL*

- Fine-tuned an equivariant graph neural network (NequIP) on **11K+** crystal structures with a custom weighted loss, cutting validation error by **15%**.
- Built reproducible training and evaluation pipelines on HPC (Python, Docker, MLflow), selecting the final model through controlled experiments and out-of-sample validation.

Software Developer Jan 2022 – Aug 2023
S&P Global *Bangalore, IN*

- Led a **5**-person team migrating legacy .NET document-processing workflows to an open-source Python platform through a phased production cutover, cutting licensing costs by **80%**.
- Architected document-AI systems combining OCR (Tesseract, pdfplumber) and PyTorch CNN classifiers, processing **10K+** financial, energy, and automotive documents per day at **95%** extraction accuracy.
- Built fault-tolerant, event-driven AWS/Docker services with retries, validation, and monitoring, cutting manual work by **90%+**.
- Owned GitHub Actions CI/CD with unit, integration, and regression tests at **80%** coverage, ensuring output parity during migration.

Software Developer Intern May 2021 – Aug 2021
LG Electronics *Bangalore, IN*

- Built a real-time logistics tracking system with Python, OpenCV, and YOLO, cutting package sorting time by **25%**.
- Developed a drowsiness detection model at **90%** accuracy, placing **3rd** in LG's internal Ideathon.

Software Developer Intern Jan 2021 – Mar 2021
ITC Infotech *Bangalore, IN*

- Designed Flask/MySQL REST APIs for master-data management and role-based access, cutting manual work by **30%**.

Projects

Academic Paper Q&A Assistant (RAG) | *Python, LangChain, OpenAI API, Pinecone*

- Built a retrieval-augmented generation app that ingests, chunks, and embeds academic PDFs into Pinecone, then answers questions with OpenAI models grounded in the retrieved passages, cutting research lookup time by **70%**.

BayWheels Trip Analytics Platform | *GCP (BigQuery), Terraform, Kafka, dbt, Prefect, Docker*

- Built batch and streaming pipelines loading **400K+** monthly Lyft ride records into partitioned BigQuery, with a Kafka, InfluxDB, and Grafana layer monitoring live ride events.

Education

Florida State University Tallahassee, FL
*Master of Science in Data Science; GPA: **4.0/4.0*** *Aug 2023 – May 2025*

Christ University Bangalore, IN
Bachelor of Technology in Computer Science *May 2018 – May 2022*

Skills

Languages & Framework: Python, SQL, Javascript, c++/C, Rust, Spark, Pytorch, Tensorflow, Tailwind, Next.js, Vue, Flask, Django
GenAI: LangChain, LangGraph, OpenAI, Claude, Pinecone, RAG, MCP, Agentic Workflows, Prompt Engineering, Automation
Data & Cloud: AWS (EC2, RDS, S3), GCP (BigQuery, Dataflow, Looker), Postgres, Docker, dbt, Prefect, Terraform, MLflow, Kafka
Product & FDE: Customer/Technical Discovery, API Integrations, Stakeholder Communications, Rapid Prototyping
