📍 Tallahassee, FL 📞 850 300 1952 ✉ mohitt.appari@gmail.com 💼 [linkedin.com/in/moh1tt](https://www.linkedin.com/in/moh1tt) 🐙 github.com/moh1tt

Experience

APD, Data Scientist, Tallahassee, FL

June 2025 – Present

- Conducted in-depth **statistical** analysis using **SPSS, SAS, and R** on **large-scale datasets** related to individuals with disabilities, identifying regional trends, billing anomalies, and compliance issues that informed regulatory reporting and strategic decision-making.
- Developed interactive dashboards in **Tableau, Power BI, and Excel** to visualize KPIs, forecast trends, and track operational performance, streamlining executive reporting and supporting agency-wide transparency.
- Worked within the Data and Quality Unit to ensure data accuracy and reportability; created **statistical summary tables** and insights that highlighted discrepancies in claims and expenses, improving data reliability and enhancing forecasting precision across APD financial workflows.

Florida State University, AI & Data Researcher, Tallahassee, FL

Jun 2024 – Sep 2024

- Researched open-source generative AI models, algorithms (**GANs, VAEs, RNNs**) to explore synthetic data generation for material property prediction and battery optimization applications.
- Implemented and benchmarked **NequIP** (MIT Open Source) for molecular stability prediction using a dataset of 11,000+ materials; improved prediction consistency by ~15% during initial validation.
- Collaborated with PhD researchers in Chemistry to align data science workflows with experimental research goals, enhancing interdisciplinary research on AI-driven material discovery and energy storage.

S&P Global, Data Scientist, Bangalore, KA

Jan 2022 – Jun 2023

- Engineered scalable **Python** pipelines using **pdfplumber, Camelot, Tesseract**, and **Amazon Textract** to extract structured data from 10,000+ complex financial and automotive documents, reducing manual processing time and costs by over 90%.
- Automated web data extraction workflows by scripting robust scraping and parsing logic in **Python**, deploying solutions to internal servers with scheduled execution, and implementing custom error handling to ensure reliable data ingestion across financial sources.
- Collaborated with cross-functional stakeholders to optimize data extraction logic and implement NLP-based entity recognition, resulting in improved reporting accuracy and reduced document processing turnaround times.

LG, SDE Intern, Bangalore, KA

May 2021 – Aug 2021

- Participated in a 2-month **LG internship** combining **webOS training** and a hackathon, developing a smart logistics and safety solution.
- Built a real-time drowsiness detection system using **Python, OpenCV, YOLO**, and **Raspberry Pi**, achieving 90% facial landmark accuracy to enhance driver safety. Designed a logistics tracking system using **CNNs** and **REST APIs** with **PostgreSQL**, reducing sorting time by 25% and securing 3rd place in LG's Ideathon.

ITC, SDE Intern, Bangalore, KA

Jan 2021 – Mar 2021

- Developed a master data management system using **Python (Flask)** and **MySQL**, enabling multi-role access for vendors, users, managers, and administrators as an intern. Implemented role-based authentication and approval workflows to enhance data security and streamline user operations.
- Automated product tracking and data updates, reducing manual workload by 30% and improving data accuracy across business units.

Education

Florida State University, Master in Data Science, Tallahassee, FL

Aug 2023 – May 2025

Coursework: Statistics, Mathematics, AI, ML, Databases, Business and Finance. GPA: 4.00

Christ University, Bachelor in Computer Science, Bangalore, KA

Aug 2018 – May 2022

Coursework: Data Structures, Operating Systems, Software Architecture, Programming. GPA: 3.92

Projects

Portfolio - Blog | *Next.js, Tailwind CSS, Vercel, Python*

2024 – Present

- Built and deployed a fast, responsive personal blog and portfolio site (**moh1tt.vercel.app**) using **Next.js** and **Tailwind CSS**, showcasing projects, blog posts, and insights on data science and machine learning.

STA5635 RAG App | *LangChain, OpenAI, Pinecone, Cohere, Streamlit*

2024

- Developed a Retrieval-Augmented Generation (RAG) application to enable contextual Q&A on course materials, streamlining academic research workflows. Engineered a document ingestion pipeline to extract, embed, and query lecture PDFs, deploying the solution with **Streamlit** for seamless access to custom LLM-driven insights.

Technical Skills

Languages: Python, SQL, R, SQL, PySpark, Java, C, Bash, HTML/CSS, JavaScript, Linux

Developer Tools: Git, Docker, Jenkins, AWS, Google Cloud Platform, Azure, Tableau, Hadoop, Kafka, Power BI

Technologies: Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, XGBoost, LightGBM, CatBoost, Prophet, SARIMA, Flask, Streamlit, Neo4j
